Barrie Crane Safety Training

Barrie Crane Safety Training - Both crane operator as well as their employers need to be aware of all the possible issues related to the use of an overhead crane. All across North America, there is legislation which provides regulation for the safe operation, inspection and maintenance of lifting machines. Crane Safety courses help owners and managers of cranes accredit their drivers based on the provincial legislation.

We have designed numerous training courses to be able to equip operators with the knowledge and skills needed to be able to make crane lifting safer and easier. Operator training really helps to extend the crane's life span by guaranteeing crane's safe operation and high performance.

Accredited operators are required to operate and run articulated cranes under 16,000 lbs. capacity. The articulated crane operator should know about the numerous operational features and characteristics of the machinery. Before use, a pre-operational equipment check should be performed. There is a legal prerequisite to perform a pre-operational inspection and a check of the overhead conditions and work-site ground.

The manufacturer's directions provide information regarding maintenance and inspection, unloading and loading of the crane. The law requires daily and annual checks. Drivers are required to maintain an up-to-date logbook in nearly all regions. They may be needed to validate equipment warranties.

It is recommended that companies include remote control devices to their cranes. Remote control improves safety by enabling the driver an easier option for handling the crane.

Placing a high priority on crane safety helps a company's bottom line. Companies which follow safe equipment practices normally enjoy greater cost savings compared to those which don't. The risk of personal injury and equipment damage is greatly lessened when a well trained driver is handling the crane. Safety conscious drivers are more productive resulting in reduced times needed for loading and unloading.
